Almost everyone who has Internet connection had a chance to face spyware. Although definition of spyware is considered to be for malicious software to define, but there are also some legal spyware programs. Legal spyware is the same as common or even malicious spyware, only they are used for different purposes. As you can guess legal spyware is for monitoring and supervision of computer users. To say in short – legal spyware is for legal spying. It can be used for children or employees monitoring. In this case it's very useful and convenient tool.

These spyware programs are able to show all online and offline activity. It enables users to see screenshots of computer that is under supervision. Program also shows used applications and duration of usage. All visited sites, time spent to view them and all other activity is available for legal spyware user.

User can get many advantages using spyware for user's control. It not only let's to keep eye on child or employee but also improves system's security. But before you use it, you must first put users au fait of spying and warn about results of it. You can dummy up it from a child, but not from a suppose or employee, because computer user's privacy is under protection of law. Legal spyware must be used and installed only with user's permission and knowledge.

Most legal spyware provide remote control and remote supervision. Program can be installed to other computer in a distance. but as it was already stated, user must be informed about it. Supervisor is enabled to be at home and take control over over the PC located at home.

The most popular offered legal spyware is Realtime-Spy from Spytech. This is the newest program of it's kind. It's exclusive feature is remote “spywatch”. It provides remote installation. All information is available on a web site, which user get together with software. the best thing about this software is that firewall, dial-up connection or DSL connection don't create any problems or inconveniences for fluent program's work. Other programs face up troubles when user has firewalls installed or has dial-up connection.

Spytech Realtime-Spy is able to obtain typed texts, because of keystrokes logging feature. It can track visited web sites and typed URLs. Program shows history and content of ICQ/MSN/Yahoo!/AOL/AIM instant

messengers. It shows all information about used programs and time of usage. There's available information about all printed files and documents. Realtime- Spy reports what files, documents and folders were opened, edited or created during work session. It logs passwords, e-mail letters and addresses, logins, names, nicknames. If computer was restarted, turned off or users have switched, you will be able to see it and time when it was done. Realtime-Spy enables users to “hang-up”, restart or turn off computer in a distance.

Another well known product from Spytech is SpyAgent. It is one of the best legal spyware. It has all advantages and qualities of Realtime-Spy: text logging, recording of e-mails, activated and used applications, visited web sites, passwords' and chats' logging, etc. But it has one more advanced feature- it shows a screenshot of monitor at any time you want. This program is great tool for supervision of home or work computer. Remote control is enabled for more than one computer.

Software Easy Computer Spying must also be mentioned in a group of legal spywares. This software will let you see what's being done on your PC while you're absent. This program runs with in a background. It's best when you want to improve you own computer from other users. With this program you will be able to view all written and read e-mails; chat logs of ICQ/MSN/Yahoo!/AOL/AIM messenger are available; you can view typed and read texts; visited web sites and activity online; passwords, logins and other information is captured.

There are plenty of advantages that could be highlighted when spyware is used legally. Illegal usage can also make advantages, but only for hackers or crackers, nor for common users. Illegal usage is crime which is led by sanctions.
