Mail bombers are softwares that flood user's e-mail with big number of mails. Mails contains different information.

Mail bombers mostly are legal programs used for business improvement. Individual users also are able to use these programs. Most popular programs are: Avalanch 3.6, Aenima 2.0, Bomsquad, Extreme Mail, Hacktec, KaBoom 3.0, Unabomber, Homicide, Digital Destruction Beta, Euthanasia, Ghost Mail 5.1, Saddamme 0.2, X-Mail, etc. Most of them are free.

Business corporations use mail bombers for newsletters. They must provide all new information about new products, new services, updates and other things. It's very convenient to use mail bomber in that case. Individual users use mail bomber for mass messages. If one had received a good joke, it's more convenient to send it to a group of friends. It is a useful and funny tool.

But in the hands of porno site's manager it can become a tool for spam. If your e-mail address is known or obtained without your knowledge you might be flooded with spam. You can get over a thousand of letters per day. They can be infected, or advertisement for porno sites, remedy, etc. Links that are included in e-mail may lead you to site's that are bundled with hijackers or some other spyware. It might be a great threat for you privacy.

Using good anti-spyware program should help you to prevent spam and mail bombers flood.
